I defined an IModuleCatalog for the module manifest in the following way.

```
[Export] public interface IModuleCatalog
{ [ImportingConstructor] IEnumerable
ExportProviders { get; } }
```

We can set the attribute in an assembly level attribute

---

(ModuleAttribute) that we will add to all modules. When we add the attribute to an assembly, everything works fine, we can access the attribute in MEF attributes in modules from that assembly.

```
[ModuleAttribute] public class
ModuleAttribute : Attribute,
IApplicationModuleAttribute { /// ///
Initializes a new instance of the class. ///
/// The name of the module. public
ModuleAttribute(string moduleName) {
ModuleName = moduleName; } ///
```
